Work Experience

DevOps Engineer

Nov 2022 - Present

Peaka Inc.

Ankara, Turkey

- Managed the orchestration and automation of multitudes of containerized applications using **Kubernetes**, enhancing system robustness and elasticity.
- Utilized **Ansible** and **Terraform** to manage **GCP** and **AWS** infrastructure, providing over 99% uptime for hundreds of users daily.
- Built and managed a monitoring and logging system using **Fluentbit**, **Elasticsearch**, and **Kibana** for tracking logs, and **Prometheus** and **Grafana** for monitoring system performance and setting up alerts.
- Orchestrated the integration of a CI/CD pipeline within **Kubernetes** using **Jenkins** and **Drone CI** for 30+ shared repositories, reducing build times by around 30%.
- Managed **Java** applications on bare-metal **Linux** servers, including deployment using **Docker Compose**, troubleshooting performance and system issues, implementing and maintaining backup strategies.

Research Intern

July 2021 - July 2022

Middle East Technical University

Ankara, Turkey

- Contributed to a research project aimed at developing an intrusion detection system for container security, using machine learning techniques trained on datasets of benign and malicious network traffic.
- Analyzed various models on these datasets and presented the results in an article.

Research Intern

July 2020 - October 2020

University College Dublin

Remote

- To generate the dataset, automated the collection of Delhi's weather pollutant data from web using **Python**.
- Identified data trends and seasonality, performed white noise checks, ensured stationarity, and ultimately generated forecasts with SARIMA. Related work Related article.

Education

Middle East Technical University

September 2017 - July 2022

Bachelor of Computer Engineering

Ankara, Turkey

- Consistently ranked #1 among Turkish engineering schools, all courses are thought in English.
- Cumulative GPA: 3.63, top 5% in class of 261.

Projects

ILMoS - Intelligent Library Monitoring System

- Developed a mobile application for my graduation group project aimed at enhancing students' library and study hall experiences while mitigating desk abuse. Utilized **Python**, **Django**, **PyTorch**, **PostgreSQL**, and **React Native**.
- Ranked 4th among more than 25 competing group projects. [Project page](#)

Reliable Data Transfer Over UDP Socket

- Developed a robust private chat program in **C++** as part of the CENG 435 - Data Communications and Networking course. Implemented a reliable communication protocol using exclusively **SOCK_DGRAM** socket over an unreliable network. Leveraged **pthread** library to create a multi-threaded application.
